Technical specifications

Press report, Public Opinion Barometer (BOP). 2nd wave 2017

Summary

Level of confidence:	95%
Variance:	p=q=50%
Sample size:	1,500 individuals
Sampling error:	± 2.53%

Scope: **Catalonia**

Univers: **Spanish citizens of 18 years of age and more** who live in Catalonia

Method of data collection:

Computer Assisted Personal Interview (CAPI)

Sampling procedure:

Stratification by province and town size, with selection of last sample units (individuals) using sex, age and place of birth crossed quotas.

Town size is divided into 6 categories:

- less or equal to 2,000 inhabitants
- from 2,001 and 10,000 inhabitants
- from 10,001 and 50,000 inhabitants
- from 50,001 and 150,000 inhabitants
- from 150,001 and 1,000,000 inhabitants
- more than 1 million inhabitants

To calculate the quotas we use the official statistics from the *Padró continu de població* from the year 2016. The age quotas correspond to the following intervals:

- 18 to 24 years of age
- 25 to 34 years of age
- 35 to 49 years of age
- 50 to 64 years of age
- 65 and more years of age

Sample size:

1,500 interviews with the following territorial distribution:

• Barcelona	1.121
• Girona	140
• Lleida	85
• Tarragona	154

Allocation:

Proportional

Sampling error:

The overall margin of error of the survey is **± 2.53%**, for a confidence level of 95% (1.96 sigma) and under the assumption of maximum indetermination (p=q=50%). In each province the margins of error are:

• Barcelona	± 2.93%
• Girona	± 8.28%
• Lleida	± 10.63%
• Tarragona	± 7.90%

Fieldwork:

The fieldwork has been performed by GESOP. Gabinet d'Estudis Socials i Opinió Pública SL, from the 26th of June to the 11st of July 2017.

Methodological note:

1. Some trend figures presented in this abstract refer to a telephone survey (CATI) performed in December 2016, the Survey about the Catalan political situation, 2016.

2. Given that we have only drawn a sample from the population (those over 17 years of age, living in Catalonia and with Spanish citizenship), all results are subject to a sampling error, meaning that not all the differences in the same questions with respect to other waves of the Barometer are statistically significant.

For instance, in a survey question where the 50 % (the worst case scenario in terms of the margin of error) gives a particular response, with a sample of 1,500 interviewees, the “true” value in the population would fall into the range of ± 2.53 of the results in the sample, this is, in between 47.47% and 52.53% .

The subsamples in two-way tables are subject to an even larger margin of error. Therefore, the conclusions that could be drawn have to be taken with caution.

3. When presenting results of questions 37 and 38 we have grouped the different political parties or coalitions from the point of view of parliamentary groups appeared after the 27th of September elections to the Catalan Parliament 2015. The results of this grouping are:

Junts pel Sí = CDC + ERC + Junts pel Sí + Democràcia i Llibertat + PDeCAT

Catalunya sí que es pot = ICV-EUiA + Podemos + Barcelona en comú + Catalunya sí que es pot

4. With respect to questions 39 and 40 about vote intention to the Congreso de los Diputados the grouping has been the following:

En comú Podem = ICV-EUiA + Podemos + Cat. Sí que es pot + Barcelona en comú + En comú Podem

Convergència Democràtica de Catalunya = CDC + Democràcia i Llibertat + PDeCAT for vote recall

PDeCAT = CDC + Democràcia i Llibertat + PDeCAT for vote intention
